

Deliver a world-class project that safeguards people and the environment while contributing to Mozambique's long-term economic development.

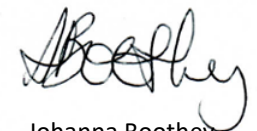

As part of this mission, our goal is to...

Prevent Life-Altering Injuries and illnesses by focusing on high consequence risk and the health of our safeguards - not solely the absence of incidents. We will maintain effective safeguards through visible leadership, Human Performance behaviors, strong security measures, and support for workforce wellbeing. We will establish and manage robust response and recovery capabilities to minimize harm during unexpected events.

Protect the Environment by developing natural resources responsibly and considering environmental impacts in every decision we make. We will comply with internal and external requirements. In Mozambique, we will strive to deliver leading environmental performance.

Promote economic development by building trust through meaningful engagement with community and stakeholders, local partnerships, and targeted socioeconomic investment. We will respect human rights and expand opportunities for the people of Mozambique.

Together, we are building a safe and lasting legacy for Mozambique's future.
